### WOLF CINEMA DCX-1000i FRONT PROJECTOR

The DCX-1000i puts out a beam of light so intense you're almost tempted to try lighting a cigar in it. This \$85,000 beast comes housed in a big, black enclosure that's designed to be built into a soft. It even has inputs and outputs for the cooling ductwork necessary to keep its 1,000-watt xenon lamp shining. The DCX-1000i can easily illuminate a 15-foot screen, and with its extraordinary maximum light output of 142 footlamberts, it's so bright you can use it with sunlight streaming in through the windows. A massive servo-controlled lens lets your installer set it up for any aspect ratio up to 2.40:1 — a setup we prefer to the less versatile add-on anamorphic lens that most high-end projectors use. Detail and color accuracy are superb, and for a projector this powerful, the black level is surprisingly deep. A long list of control features lets a talented technician achieve a nearly perfect picture. — Brent Butterworth
